

## **Data curation & Validation for an Artificial Intelligence (AI) Agri tech Company -Intello Labs, May. 2018.**

***The biggest challenge for retailers is procuring right quality of fresh produce like tomato, onion etc at right price.***

How can procurement managers be doubly sure of their decision about the quality of the produce and maintain accuracy???. Impossible !!! But, their decisions will impact operational efficiency of the retail stores ..

Problem ....Problem ... Problem....

Intello labs has a solution for this problem.

Intello Labs has an AI (Artificial intelligence) based commodity testing app for food quality testing & grading using deep learning .

Enables its clients to source Agri commodities of desired quality, fair price determination & reduction in logistics cause.

BSBS Student Researchers worked for two clients of Intello Labs by doing commodity tagging & validation for TOPC(Tomato, Onion, Potato, Cauliflower). This solved the procurement problem of Reliance Fresh & More (two clients of Intello Labs).
